1920 CENSUS--INDEX  
DEPARTMENT OF COMMERCE  
BUREAU OF THE CENSUS

**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 10 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or pulmonary disease. The subjects were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of 30 minutes of aerobic exercise at 60% of the maximum HR. The control group was instructed to maintain their current level of activity. The HR and EE were measured at rest and during exercise at the beginning and end of the 10-week period. The results showed that the training program had a significant effect on the HR and EE of the subjects. The HR at rest decreased significantly from 72 to 68 beats per minute, and the EE at rest decreased significantly from 1,200 to 1,100 kcal per day. The HR and EE during exercise also decreased significantly. The results suggest that a 10-week training program can improve the cardiovascular and metabolic health of sedentary, middle-aged women.
